

Rave Reviews!

Charlie Thomas, Technician
Kropf Mechanical Detroit, MI

"I installed the HydroClear 3100 on ceiling mounted heat pumps in the sensitive and problem areas of WDIV-TV in Detroit over a year ago, I talked to the facilities manager to see if there were any problems with their operation and was told they are trouble-free. I've had this customer for 19 years and it's the first time that I haven't had a problem. The heat pumps are above desks and computers and they used to really make a mess. The HydroClear has worked as advertised."

Jim Smith, Owner
Comfort Zone AC & Heating, Vero Beach, FL

"One of my supply reps brought me a Hydro-Clear 3100 flyer. We hooked it up to our training unit and plugged up the drain line with cotton balls. I wanted to see how it worked before selling to customers. The cost is very reasonable to the customer when adding it to the job and seriously, who wants a customer to call you in less than 6 months after you installed a new system. I put them on all my new change-outs."

Bobby Bevill, Jr., Service Manager
Davis Services, Inc. Spartanburg, SC

"I'm the service manager for an HVAC contractor. We installed your products and have had very good results with them. I would like brochures to include in binders for all our techs to show customers."

HYDROCLEAR

Smart Technology for The Toughest Condensate Clogs

- Pressure-driven automated clog remover with up to 60 PSI of pressure
- Removes algae from A/C condensate lines
- Overcomes double trap line issues
- Perfect for snowbirds, high-end customers & multi-family housing
- Reduces unnecessary callbacks
- Residential / Commercial

The Plexaire HydroClear Automatically Detects & Clears Clogs In Gravity Condensate Drains

1. NORMAL OPERATION

HydroClear is installed in a trap and connected to float switch. Condensate drains via **normal gravity flow**.

Once a day, HydroClear flushes trapped condensate preventively.

2. CLOG DETECTED

If a clog forms, condensate backs up to drain pan, the float switch rises and activates HydroClear.

3. DOWNSTREAM CLOGS

Up to 60PSI comes out from HydroClear and clears clog using the existing water column of condensate.

4. UPSTREAM CLOGS

HydroClear uses a vacuum up to 24 in. Hg to clear clog.

Once the clog is cleared, the condensate drain returns to normal operation.

The Plexaire HydroClear

Smart Technology for The Toughest Condensate Clogs

Q: Why are clogs forming as early as 90 days after a new system install?

A: Today's aluminum coils are lightweight and cheaper than copper but without antibacterial properties of copper, a clog can happen in as little as 90 days. Though clogs are not covered in the 1 Year Warranty, you lose time, money and probably do the service free-of-charge to keep your customer happy.

Q: Is this a condensate pump?

A: No. HydroClear is specially designed to clear clogs in gravity drains. It allows normal gravity flow and if clog forms, HydroClear automatically clears it.

Q: How long is the drain maintained?

A: HydroClear keeps drains flowing until your next planned maintenance visit. During this visit, normal drain maintenance is required.

Q: Can chemicals be used with HydroClear?

A: Yes, chemicals can be used and will not damage HydroClear.
